-13 10 6 A function f is periodic if its values repeat at regular intervals. Graphically, this means that if the graph of f is shifted horizontally by c units, the new graph is identical to the original. In function notation, periodic means that, for all t in the domain of f, f(t+c) = f(t). The smallest positive constant c for which this relationship holds for all values of t is called the period of f. The midline of a periodic function is the horizontal line midway between the function ' s ...
