Design Metrics of Embedded Systems A Design Metric is a measurable feature of the system's performance, cost, time for implementation and safety etc. Most of these are conflicting requirements i.e. optimizing one shall not optimize the other: e.g. a cheaper processor may have a lousy performance as far as speed and throughput is concerned.

*Line coding - STUDYTRONICS*

This is the first book on embedded systems to offer a unified approach to hardware and software specification and design issues -- and the first to outline a new specify- explore-refine paradigm that is presently being used in industry in an ad-hoc manner, but until now has not been formally described.
