Provides a look at the future as it is envisioned by the Media Lab at MIT, where scientists are retooling mass media to the desires and whims of the individual

The influence on Ovid of Hesiod, the most important archaic Greek poet after Homer, has been underestimated. Yet, as this book shows, a profound engagement with Hesiod's themes is central to Ovid's poetic world. As a poet who praised women instead of men and opted for stylistic delicacy instead of epic grandeur, Hesiod is always contrasted with Homer. Ovid revives this epic rivalry by setting the Hesiodic character of his Metamorphoses against the Homeric character of Virgil's Aeneid. Dr Ziogas explores not only Ovid's intertextual engagement with Hesiod's works but also his dialogue with the rich scholarly, philosophical and literary tradition of Hesiodic reception. An important contribution to the study of Ovid and the wider poetry of the Augustan age, the book also forms an excellent case study in how the reception of previous traditions can become the driving force of poetic creation.

Diffusion and Eletrophoretic NMR experiments resolve chemical compounds based on their molecular motion. This publication introduces the basics of these methods and explains how they can be used to measure the size of molecules and aggregates, to determine degree of polymerization and to solve other chemical problems. Supplied with many case studies, the book is a must-have for students and researchers who work with practical NMR measurements.

Kidnapped into slavery in 1841, Northup spent 12 years in captivity. This autobiographical memoir represents an exceptionally detailed and accurate description of slave life and plantation society. 7 illustrations. Index.

How to Build a Brain provides a detailed exploration of a new cognitive architecture - the Semantic Pointer Architecture - that takes biological detail seriously, while addressing cognitive phenomena. Topics ranging from semantics and syntax, to neural coding and spike-timing-dependent plasticity are integrated to develop the world's largest functional brain model.

This volume offers a thorough examination of the syntactic, semantic, pragmatic and discourse properties of noun phrases in a wide variety of creole (and non-creole) languages including Cape Verdean Creole, Santome, Papiamentu, Guinea-Bissau Creole, Mindanao Chabacano, Réunionnais Creole, Lesser Antillean, Haitian Creole, Mauritian Creole, Seychellois, Sranan, Jamaican Creole, Berbice Dutch Creole and African American English. Comparative studies also consider the determiner systems of Middle and Modern French, European Portuguese, Brazilian Portuguese, Spanish, Ewe, Fon and Gun. This compilation of 16 chapters brings together descriptive, theoretical, diachronic and synchronic studies that focus on the structure and interpretation of bare nouns in creoles. The contributions demonstrate the variety and complex nature of determiner systems in creoles and their widespread use of bare nouns in comparison to their source languages. This volume is evidence of the relevance of creole languages to theories of language creation, language change and linguistic theory in general.
