The Human Fertilisation and Embryology Act 1990 sets out prohibitions relating to the creation, use and storage of human embryos and human admixed embryos, and the use and storage of human gametes. Some of these prohibitions are absolute - for example, a human embryo can never be placed in an animal or vice versa.

| Chair of Human Fertilisation & Embryology Authority

Prenatal development (from Latin natalis 'relating to birth') includes the development of the embryo and of the fetus during a viviparous animal's gestation.Prenatal development starts with fertilization, in the germinal stage of embryonic development, and continues in fetal development until birth.. In human pregnancy, prenatal development is also called antenatal development.

Prenatal development - Wikipedia

Human embryology is the study of this development during the first eight weeks after fertilisation. The normal period of gestation (pregnancy) is about nine months or 40 weeks. The germinal stage refers to the time from fertilization through the development of the early embryo until implantation is completed in the uterus.

Human embryonic development - Wikipedia

This page shows some key events of human development during the embryonic period of the first eight weeks (weeks 1 - 8) following fertilization. This period is also considered the organogenic period, when most organs within the embryo have begun to form.

Embryonic Development - Embryology

In this Inderbir Singh Human Embryology 11th Edition 2018 book, care has been taken to ensure that the text provides all the information necessary for an intelligent understanding of the essential features of the development of various organs and tissues of the human body.

Human embryogenesis Embryogenesis, the first eight weeks of development after fertilization, is an incredibly complicated process. It's amazing that in eight weeks we're transforming from a single cell to an organism with a multi-level body plan. The circulatory, excretory, and neurologic systems all begin to develop during this stage.

Human embryogenesis (article) | Embryology | Khan Academy

Human Embryology and Developmental Biology is the study of the fascinating process in humans and animals that turns a single fertilised egg into a whole new individual with all the many specialised cell types.

Human Fertilisation and Embryology Authority - GOV.UK

An embryologist is a scientist who studies embryology. Any organism that reproduces sexually must create some sort of embryo as it develops into an adult form. An embryologist may study the development of animals, plants, and even fungi. Evolutionary biologists often study embryology as a means of understanding complicated lines of evolution.

Embryology - Definition, History and Careers | Biology ...

Embryology is the basis for understanding the intimate relation between structures in different organ systems, such as the nervous system and muscle, and is primordial for understanding disorders of development that in the human may present as one of the congenital myopathies. From: Fetal and Neonatal Physiology (Fifth Edition), 2017
