This completes the proof. Editor's Notes:  
Using the following identities [2, 3]  $L_{n+r}L_n - L_{2n} = 5(\pm 1)^n$

Solution by Hideyuki Ohtsuka, Saitama, Japan. For any root  $r$  of the equation  $x^3 \mp F_n x^2 + F_{n+1} = 0$  we have  $r^3(F_n \mp r) = r(r^2 F_n \mp r^3) = r F_{n+1}$ . In addition, Vieta's formula asserts that  $a + b + c = F_n$ . Using the above identity, we find

**ELEMENTARY PROBLEMS AND SOLUTIONS** which gives  $X^n = \sum_{i=0}^n P_i(x) t^i + \sum_{j=0}^n F_j(x) t^j$

. After comparing coefficients of  $t^n$ , we obtain  $P_n(x) = F_n(x) + x \sum_{s=0}^{n-1} P_n(x) F_s(x)$ .

The second relation follows from  $2 \sum_{t=1}^n x^t - \sum_{t=2}^n 2 \sum_{t=1}^{n-t} x^t = x \cdot t - \sum_{t=2}^n 2 \sum_{t=1}^{n-t} x^t$ , which leads to

~~SOLUTIONS~~ Solution by Nicu, sor Zlota,  
[Traian Vuia] Technical College,

Foc, sani, Romania. The Kantorovich's  
inequality states that if  $a, b \in \mathbb{R}$ ,  $a < b$ , and  
 $x_i \in [a, b]$ ,  $t_i \in \mathbb{R}^+$ , then  $\sum_{i=1}^n t_i x_i! \sum_{j=1}^n t_j = 1$   
 $\sum_{i=1}^n t_i x_i \leq (a + b) \sqrt{4ab \sum_{i=1}^n t_i!}$ . Putting  $t_i = F_i^2$ ,  
and taking into account the famous  
inequality  $2 < e \leq 1 + 1/x$

The Problem: Most educators say they want to "give students a voice," but they don't always know how to make that happen. The Solution: Using podcasting and live streaming, we can literally broadcast student voices right out into our schools and communities. Students can talk about topics or events that matter to them, or they can even share their own writing pieces or class projects.

The Laplace transform is a well established mathematical technique for solving a differential equation. Many mathematical problems are solved using transformations. The idea is to transform the problem into another problem that is easier to solve. On the other side, the inverse transform is helpful to calculate the solution to the given problem.

In this connection, particular attention must be given to verifying that the chosen elementary events are equally probable and that in the computation of  $m$  and  $n$  the same space of elementary events is used.
