CMC has been an innovator in the emergency services industry for over 40 years. In 1978 Jim Frank endeavored to make rescue safer and more efficient by founding California Mountain Company (later CMC Rescue, now CMC), a company that sourced and supplied specialized life safety equipment to the rescue community. Today, CMC is a globally recognized, employee-owned company that proudly manufactures many products in our ISO-certified Santa Barbara facility, and provides specialized education and training for rescue and rope access professionals. CMC recommends that all rope technicians seek qualified, hands-on instruction from a trusted source. The CMC School provides this type of training with a focus on learning-by-doing. Enables workplace responders to prepare for and respond to falls from height How do you rescue someone suspended in midair or trapped above ground? Author Loui McCurley, an expert in technical rope rescue with more than twenty-five years of experience, has the answers. Following her tested and proven advice, readers will learn how to prepare for and safely rescue "at-height" workers and others from "falls from height." The book fully bridges the gap between planning and execution, steering readers toward simple workplace-specific solutions. Moreover, it explains how to develop and implement a comprehensive protection program, enabling all organizations and their employees to fully prepare themselves to respond to a fall from height. Falls from Height is divided into four parts: Part I: Regulatory Considerations, Rescue Plans, and Developing a Rescue Capability underscores the need for a rescue program, explaining how to fully leverage available resources to optimize the program. Part II: Equipment, Systems, and Skills details the skills that all rescuers should have and the equipment they need to perform a rescue at height. Part III: Putting It All Together discusses principles of rigging, single-rescuer methods, and group-rescuer methods. Part IV: Successful Workplace Planning examines the unique challenges of different workplace environments and then offers a step-by-step guide for implementing the book's recommendations. Based on the premise that a fallen worker must be rescued quickly and efficiently, without putting others in harm's way, Falls from Height is a must for all workplace responders, enabling them to prepare for and respond to fall victims like experienced rescuers.
