Over the past seven decades, human rights education has blossomed into a global movement. A field of scholarship that utilizes teaching and learning processes, human rights education addresses basic rights and broadens the respect for the dignity and freedom of all peoples. Since the founding of the United Nations and the adoption of the Universal Declaration of Human Rights in 1948, human rights education has worked toward ensuring that schools and non-formal educational spaces become sites of promise and equity. Bringing together the voices of leaders and researchers deeply engaged in understanding the politics and possibilities of human rights education as a field of inquiry, Monisha Bajaj's Human Rights Education shapes our understanding of the practices and processes of the discipline and demonstrates the ways in which it has evolved into a meaningful constellation of scholarship, policy, curricular reform, and pedagogy. Contributions by pioneers in the field, as well as emerging scholars, constitute this foundational textbook, which charts the field's rise, outlines its conceptual frameworks and models, and offers case studies from Africa, Asia, Latin America, Europe, the Middle East, and the United States. The volume analyzes how human rights education has been locally tailored to diverse contexts and looks at the tensions and triumphs of such efforts. Historicizing human rights education while offering concrete grounding for those who seek entry into this dynamic field of scholarship and practice, Human Rights Education is essential reading for students, educators, researchers, advocates, activists, practitioners, and policy makers. Contributors: Monisha Bajaj, Ben Cislighi, Nancy Flowers, Melissa Leigh Gibson, Diane Gillespie, Carl A. Grant, Tracey Holland, Megan Jensen, Peter G. Kirchsclaeger, Gerald Mackie, J. Paul Martin, Sam Mejias, Chrissie Monaghan, Audrey Osler, Oren Pizmony-Levy, Susan Garnett Russell, Carol Anne Spreen, David Suárez, Felisa Tibbitts, Rachel Wahl, Chalank Yahya, Michalinos Zembylas.

Study & Master Agricultural Sciences Grade 10 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Agricultural Sciences. The comprehensive Learner's Book includes: * an expanded contents page indicating the CAPS coverage required for each topic * activities throughout that help develop learners' knowledge and skills * revision tasks and review at the end of each module that provides for consolidation of learning * case studies that link science to real-life situations and present balanced views on sensitive issues * 'information' boxes providing interesting additional information and 'Note' boxes that bring important information to the learner's attention * Glossary boxes to explain unfamiliar and difficult terms

Karoo veld promotes an ecosystem health approach to veld assessment, recognising that soil, plants, insects and wild animals, work with the land user to sustain the productivity and value of Karoo veld.

Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council--and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

Includes Publications received in terms of Copyright act no. 9 of 1916.

In recent years the basic science viva of the Final FRCA has evolved a more clinical perspective. The new edition of the highly successful Anaesthesia Science Viva Book incorporates this new clinical emphasis, giving candidates an insight into the way the viva works, offering general guidance on exam technique, and providing readily accessible information relating to a wide range of potential questions. Questions are divided broadly into the four areas covered by the exam: applied anatomy, physiology, pharmacology and clinical measurement. Answers have been constructed to provide candidates with more than enough detail to pass the viva. Covering the full scope of the basic science syllabus, and written by an experienced FRCA examiner, The Anaesthesia Science Viva Book, second edition, is an essential purchase for every Final FRCA candidate.
